

Customer Training

Building employee skills and improving engine performance

MAN Diesel & Turbo's training service is a valuable investment for your business; it improves the skills and productivity of your employees, and enhances the performance of your engines by making them run longer, more efficiently and more reliably.

Training is delivered at our purpose-built PrimeServ Academy in Stockport, however, we can also offer training on-site at your business location or equipment site anywhere in the world.

Our scheduled training packages cover all of our supported products, including Pielstick, MAN two-stroke and four-stroke engines, which include Mirreles Blackstone, Paxman and Ruston engine types. In addition, we also offer courses on general engine familiarisation, which can be tailored to any type of engine that you have, providing you with one-stop access to all the learning you need.

Our one week courses are aimed at engineers or operators who want to gain a better insight into engine design and operation. While predominantly theory based, they can include practical work for specific engine types.

Our two week courses are designed for operators and maintenance staff who require more detailed hands on instruction and practical participation. These courses cover theory and practice of all major maintenance tasks and overhaul procedures for a wide range of engine types, including trouble-shooting techniques.

Key benefits:

- Reputable and reliable organisation
Cost effective training with measurable returns
- Improved operator skills resulting in more efficient performance
- Theoretical understanding to minimise problems and aid trouble-shooting
- Reduced downtime through more skilful operation and maintenance
- Practical, hands-on instruction for a wide range of engines
- Comprehensive, flexible training for all levels of staff
- Tailored courses for specific requirements or engine types
- UK based and worldwide, with on-site delivery where required
- Specialist training for engine associated equipment including turbochargers, governors and control systems
