

High Quality Fuel Injection Overhauls

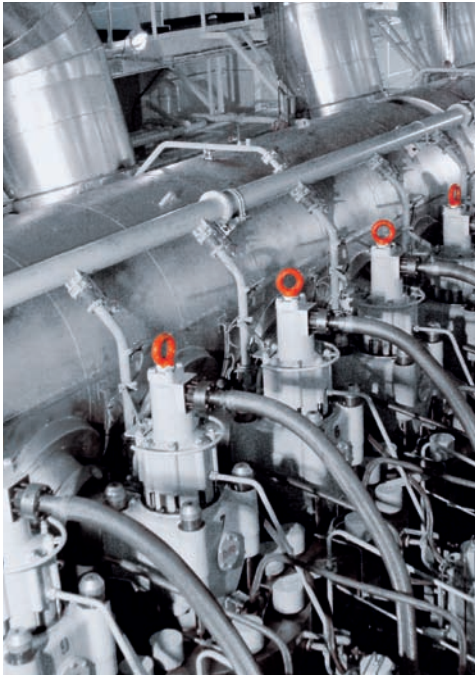

The condition of your engine's fuel injection equipment is critical. Beyond the obvious damage caused by malfunction, low fuel consumption and exhaust emissions as well as high engine output rely on its efficiency. MAN Diesel & Turbo has over 30 years experience in fuel injection overhauls and this is reflected in the high quality service we provide today.

Modern diesel engines place increasingly high demands on fuel injection equipment. The effects of higher operating pressures and temperatures as well as frequently polluted fuel oil all take their toll. Operators failing to take preventative action can pay a high price in operational interruptions and unexpected equipment repair bills.

To help customers avoid this, MAN Diesel & Turbo offers expert overhaul and corrective maintenance services. It has conveniently located, world-class workshop facilities which specialise in the reconditioning of fuel injection equipment using the latest technology and employing highly skilled engineers.

High Quality Fuel Injection Overhauls

Our technicians are available 24 hours a day, seven days a week. MAN Diesel & Turbo provide the very highest standards in fuel injection service and overhaul for the following equipment for both two and four stroke engines operating in marine, industrial and traction applications.

- Single and in-line fuel pumps
- Fuel injectors
- Governing systems
- Fuel nozzles
- Spindles & guides
- Plungers & barrels
